COMPREHENSIVE NEUROLOGY CLINIC - CLINICAL EVALUATION NOTE

Patient Name: STERLING, MARCUS DOB: 11/04/1973 (52 yo M) Acc No: 671044
Date of Service: 01/22/2026 Encounter Type: Neurological Consultation
Ordering Provider: RACHEL ADAMS, MD (Neurology)
Facility: Regional Neuroscience Center, Suite 500

History of Present Illness

Patient is a 52-year-old male presenting with persistent intractable headaches and progressive cranial nerve deficits.
Symptoms have worsened over the past 8 weeks with new onset facial paresthesias and asymmetric sensorineural hearing changes.
Pain severity VAS: 7/10. Failed multi-agent oral pharmacotherapy including topiramate and sumatriptan.

Neurological Examination

Mental Status: Alert and fully oriented x 4. Speech fluent without dysarthria.
Cranial Nerves: Asymmetric sensation over right V2/V3 distribution. Decreased hearing acuity in right ear.
Motor/Sensory: Normal muscle strength 5/5 in all four extremities. No pronator drift.
Reflexes: 2+ symmetric throughout. Plantar responses flexor bilaterally.

Clinical Assessments

1. Cranial nerve disorder, unspecified - G52.9 (Primary)
2. Chronic intractable migraine without aura - G43.019
3. Facial paresthesia - R20.2

Treatment Plan & Orders

Requested Procedure: CPT 70553 - MRI Brain with and without contrast
Clinical Indication: Progressive focal neurological cranial nerve deficit to evaluate for cerebellopontine angle mass / acoustic neuroma or demy
Follow-up in clinic after imaging completion.

Electronically Signed by: RACHEL ADAMS, MD on 01/22/2026 at 04:45 PM EST
